WORK EXPERIENCE

- **Company - Centre for Development of Advanced Computing (C-DAC)** October 2025 - Present

  Position - Project Associate Chennai, Tamil Nadu

  Key Responsibilities:

- Designed, developed, and implemented backend business logic using Java and Spring Boot, writing clean, reusable, and maintainable code to meet application requirements.
- Maintained RESTful APIs using Java and Spring Boot, implementing efficient endpoint mapping, data retrieval, and system integration.
- Streamlined bulk data import processes and resolved data validation and migration issues to improve data onboarding efficiency.
- Tested RESTful APIs using Postman and monitored PostgreSQL databases and backend services, proactively resolving issues and contributing to a 30% reduction in unplanned downtime.
- Provided Tier-2 technical support for backend operations, resolving critical incidents within 2 hours to minimize service disruptions and maintain system stability.
- Collaborated with stakeholders to gather and clarify technical requirements, coordinate development activities, and ensure timely project delivery.

Key Achievements:

- Developed 2 major application modules and provided backend support across 5+ major application modules.
- Fixed and maintained 30+ RESTful APIs across multiple application modules, ensuring reliable backend functionality.
- Led data digitization initiatives, executing large-scale bulk data imports while ensuring data accuracy and consistency.
- Successfully imported and validated 1,00,000+ records during bulk data migration.
- Diagnosed and resolved production API issues through root cause analysis, improving response times by 25% and reducing recurring issues by 30%.
- Guided junior developers in understanding backend workflows, RESTful API development, debugging, and improve team productivity and code quality.

- **Company - Mphasis Limited** June 2022 - May 2025

  Position - Software Engineer Chennai, Tamil Nadu

  Key Responsibilities:

- Developed, integrated, and maintained backend services using Java and Web Services to support web-based applications in cloud environments.
- Developed and supported cloud-based solutions using AWS services, including EC2, S3, RDS, VPC, and IAM.
- Implemented AWS auto-scaling configurations for EC2 workloads to improve resource utilization and application scalability.
- Optimized data management and integration between Amazon RDS and S3 to improve data retrieval efficiency and cost effectiveness.
- Performed code debugging, testing, and documentation in an Agile development environment to improve software quality and maintainability.

Key Achievements:

- Optimized backend services and database queries, reducing average application load times by up to 30%.
- Improved resource utilization by 30% through AWS auto-scaling configurations while supporting 99.9% application availability.
- Reduced post-release defects by 20% through systematic testing, debugging, and improved documentation practices.
- Prepared technical documentation, including flowcharts, design layouts, and test reports, to support application development, troubleshooting, and maintenance.

.

TECHNICAL SKILLS

- **Programming Languages:** Java, Python
- **API Development & Frameworks:** Spring framework, Spring Boot, RESTful APIs
- **Cloud Platforms:** AWS
- **Tools:** MySQL, PostgreSQL, Postman, IntelliJ IDEA, VS Code, Docker
- **Data Skills:** Data Analysis, Data Science, Pandas, Machine Learning, MS Office, Libre
- **OS:** Windows, Linux

PROJECTS

- **Armament Inspection Information Management System (AIIMS)**
  - Deliver technical support and assisting with backend operations, data handling, and system stability.
  - Develop and enhance RESTful APIs and mapping using Java and Spring Boot, ensuring efficient data processing, seamless integration, and alignment with business requirements.
  - Provide ongoing application production and API support, troubleshooting backend issues, optimizing performance, and assisting teams to ensure smooth and reliable system operations.
  - Managed source code using Git and GitLab, including branching, merging, and conflict resolution
  - **Technologies:** Java, Spring Boot, PostgreSQL, RESTful APIs, Postman, MS Office, Linux, Libre office

- **Insurance Policy Management Company Portal**
  - Developing and implementing backend and frontend components using Java, Spring-boot and Angular. Integrated RESTful APIs using for CURD operation.
  - Used Docker to containerization, configure development environment and simplify application deployment across different environments.
  - Performance and productivity improvements of 30–70% achievable with this modern tech stack compare to the microservice architecture.
  - Participated in peer code reviews, team knowledge sharing, and continued learning to stay current with programming best practices.
  - **Technologies:** Java, Spring Boot, Angular, MySQL, RESTful APIs, Docker

EDUCATION

KSR College of Engineering (Anna University) Namakkal, Tamil Nadu

- Bachelor of Technology – Information Technology, *CGPA - 8.3/10* 2018 – 2022
- **Courses:** Data Structures, Operating Systems, Networking, Databases

CERTIFICATIONS & PROFESSIONAL TRAINING

GUVI (Affiliated with IIT-Madras) 2024 – 2025

- **Master of Data Science**
- Completed training in Data Science, Data Analytics, and Machine Learning, focusing on data pre-processing, exploratory data analysis, and model training and development.
- Proven track record in developing robust, cloud-based solutions, optimizing system performance, and delivering high-quality software in collaborative environments.
- Applied Python, Pandas, NumPy, and machine learning techniques to analyze datasets and develop data-driven solutions.
- **Technologies:** Python, Pandas, NumPy, Selenium, Matplotlib, Power BI, Machine Learning
